The Time-to-Market Challenge

Simplified Revenue Model

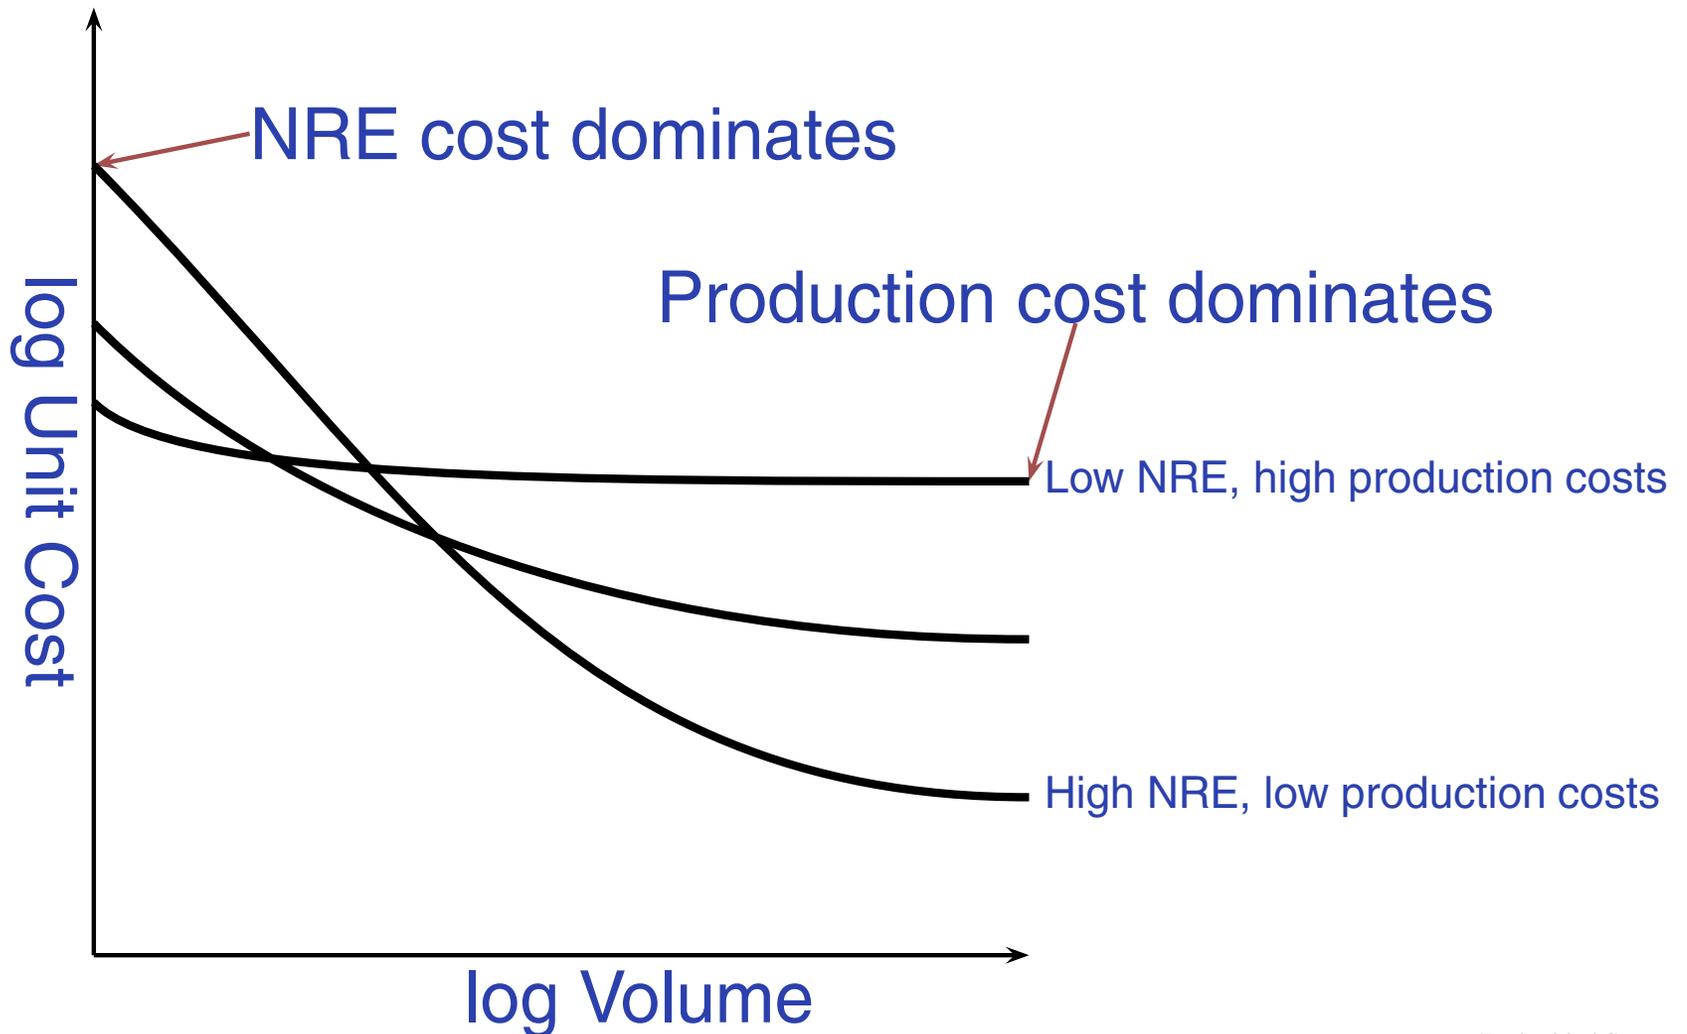

Assuming a constant market ramp, on-time revenue is $\frac{1}{2}bh = \frac{1}{2} \cdot 2W \cdot W = W^2$ and delayed revenue is $\frac{1}{2}(2W - D)(W - D)$ so fractional revenue loss is

$$\frac{D(3W - D)}{2W^2} = O(D^2)$$

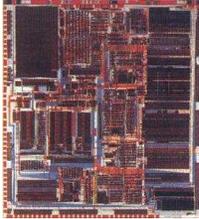

Example: when $W = 26$ and $D = 10$, fraction lost is about 50%.

NRE

Nonrecurring engineering cost:
The cost of producing the first one.

Embedded System Technologies

Integrated Circuits

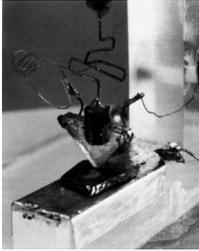

Processing elements

Design tools

IC Technology

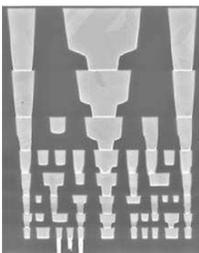

1947: First transistor (Shockley, Bell Labs)

1958: First integrated circuit (Kilby, TI)

1971: First microprocessor (4004: Intel)

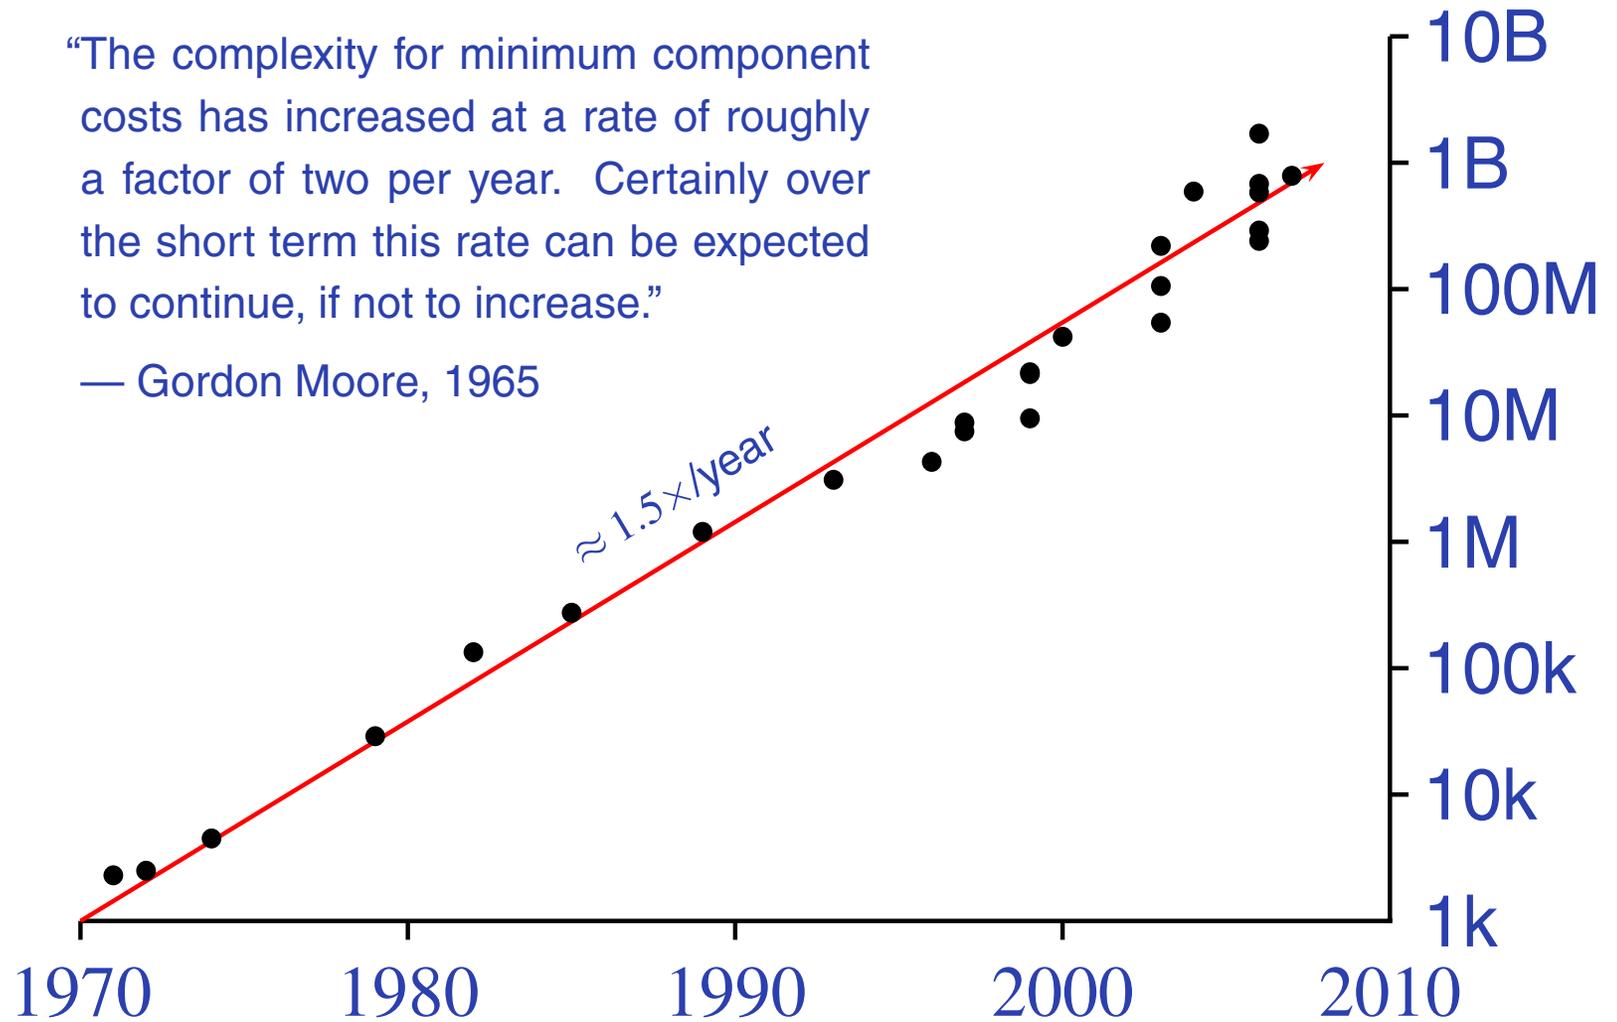

Today: eight wire layers, 45 nm features

Moore's Law: Transistors per chip

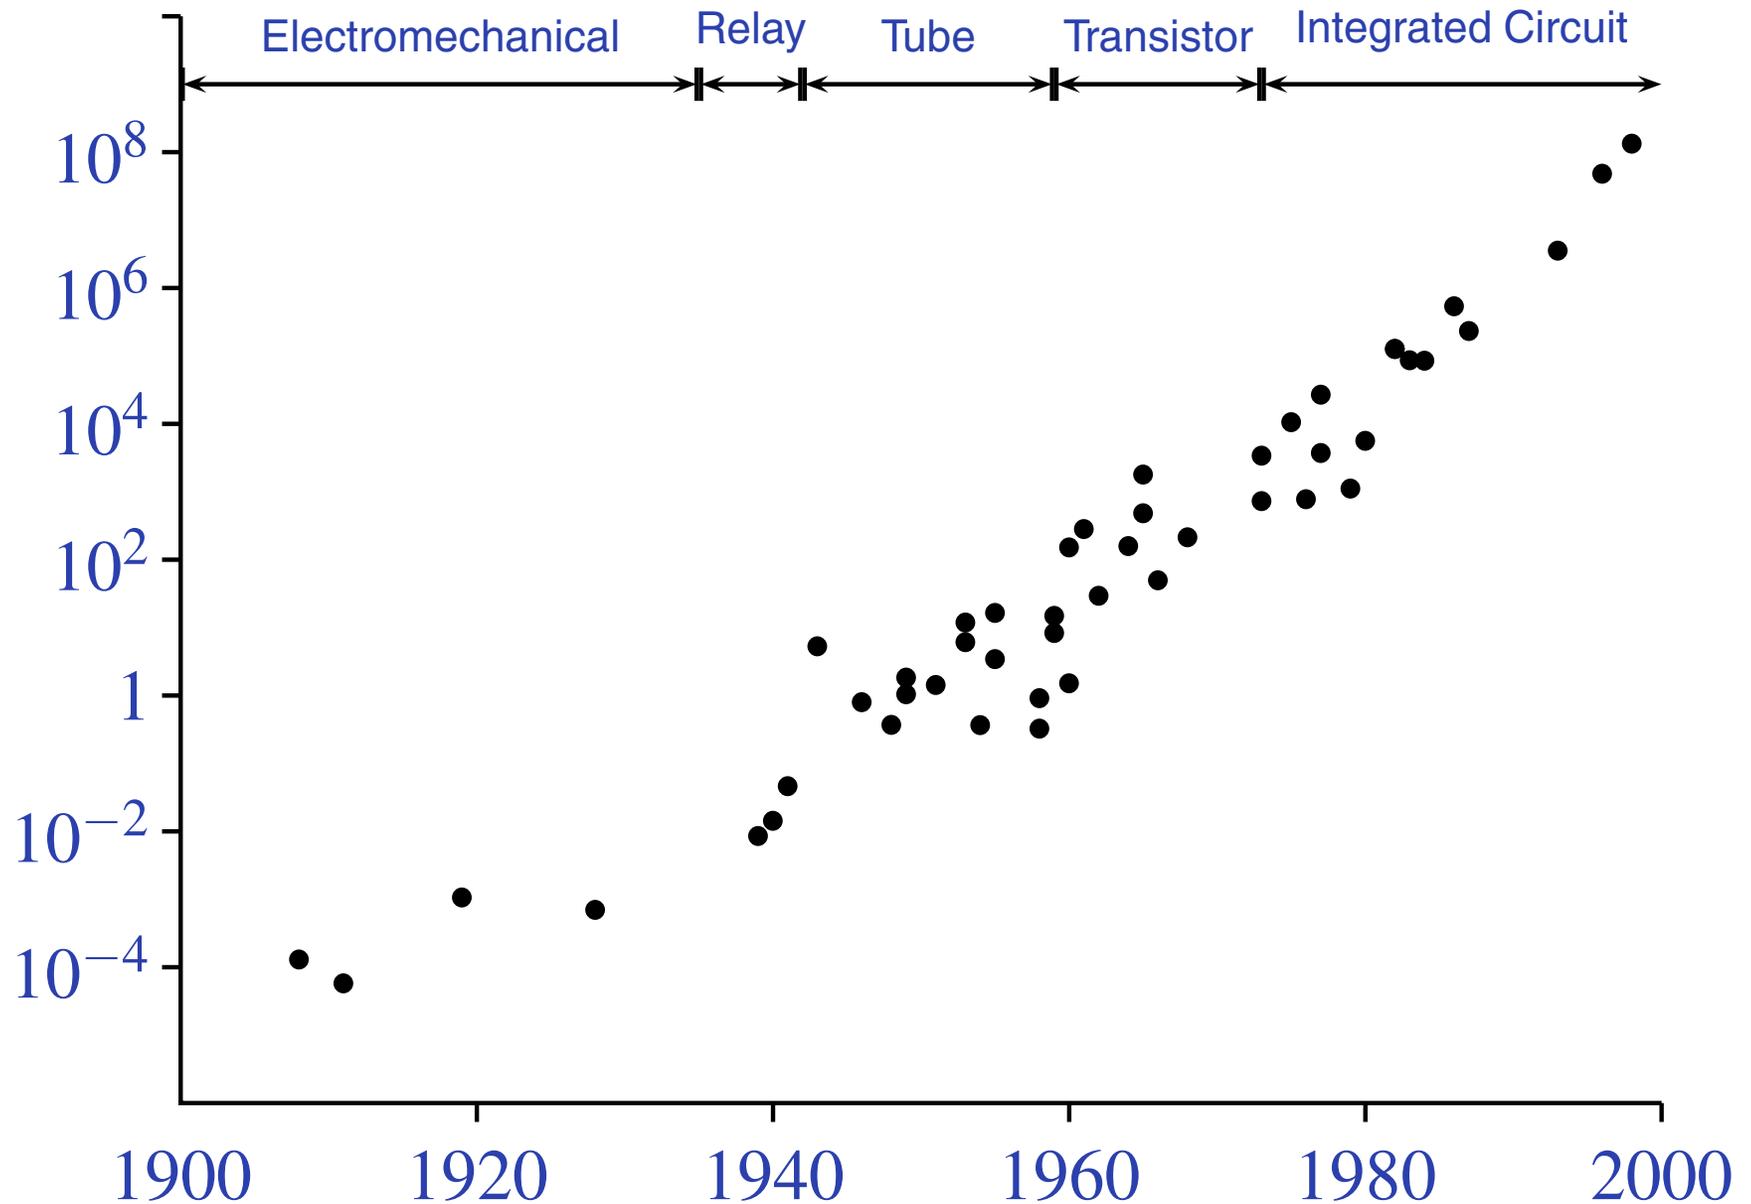

“The complexity for minimum component costs has increased at a rate of roughly a factor of two per year. Certainly over the short term this rate can be expected to continue, if not to increase.”

— Gordon Moore, 1965

1918 Sears Roebuck Catalog

Home Motor.

This motor, as shown above, will operate a sewing machine. Easily attached; makes sewing a pleasure. The many attachments shown on this page may be operated by this motor and help to lighten the burden of the home. Operates on usual city current of 105 to 115 volts. Shipping weight, about 5 pounds.

No. 57F7564 Price, complete, as shown..... **\$8.75**

Beater Attachment.

Whips cream and beats eggs, and many other uses will be found for these attachments when used in connection with the Home Motor. Parts include the stand, handle and the beater. Shipping weight, about 14 ounces.

No. 57F7585 Price..... **\$1.30**

Churn and Mixer Attachment.

Used in connection with the Home Motor, makes a small churn and mixer for which you will find many uses. The attachments include the base, supports, mixer, handle and special cover for jar. Shipping weight, about 1 3/4 pounds.

No. 57F7582 Price..... **\$1.30**

Fan Attachment.

Includes fan and guard which can be quickly attached to Home Motor, and will be a great comfort in hot weather. Shipping weight, about 14 ounces.

No. 57F6215 Price..... **\$1.30**

About \$100 in today's dollars.

Cost of Designs is Rising

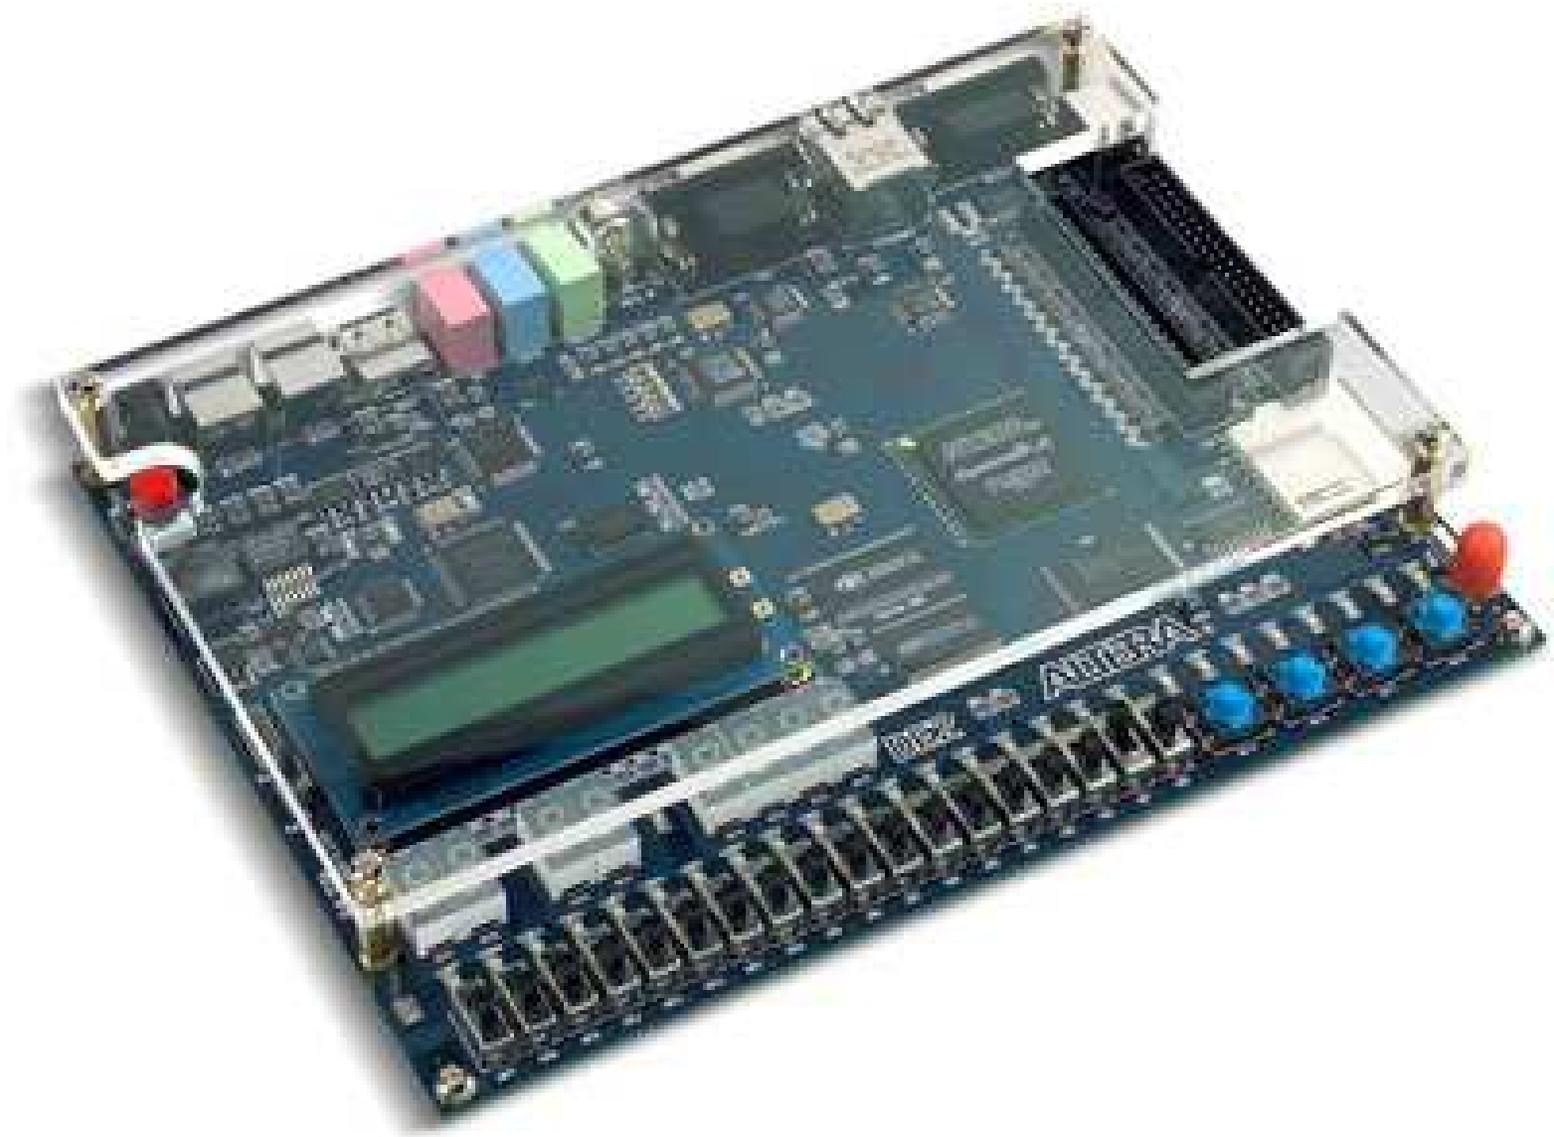

1981: 100 designer-months for leading-edge chip
10k transistors, 100 transistors/month

2002: 30 000 designer-months
150M transistors, 5000 transistors/month

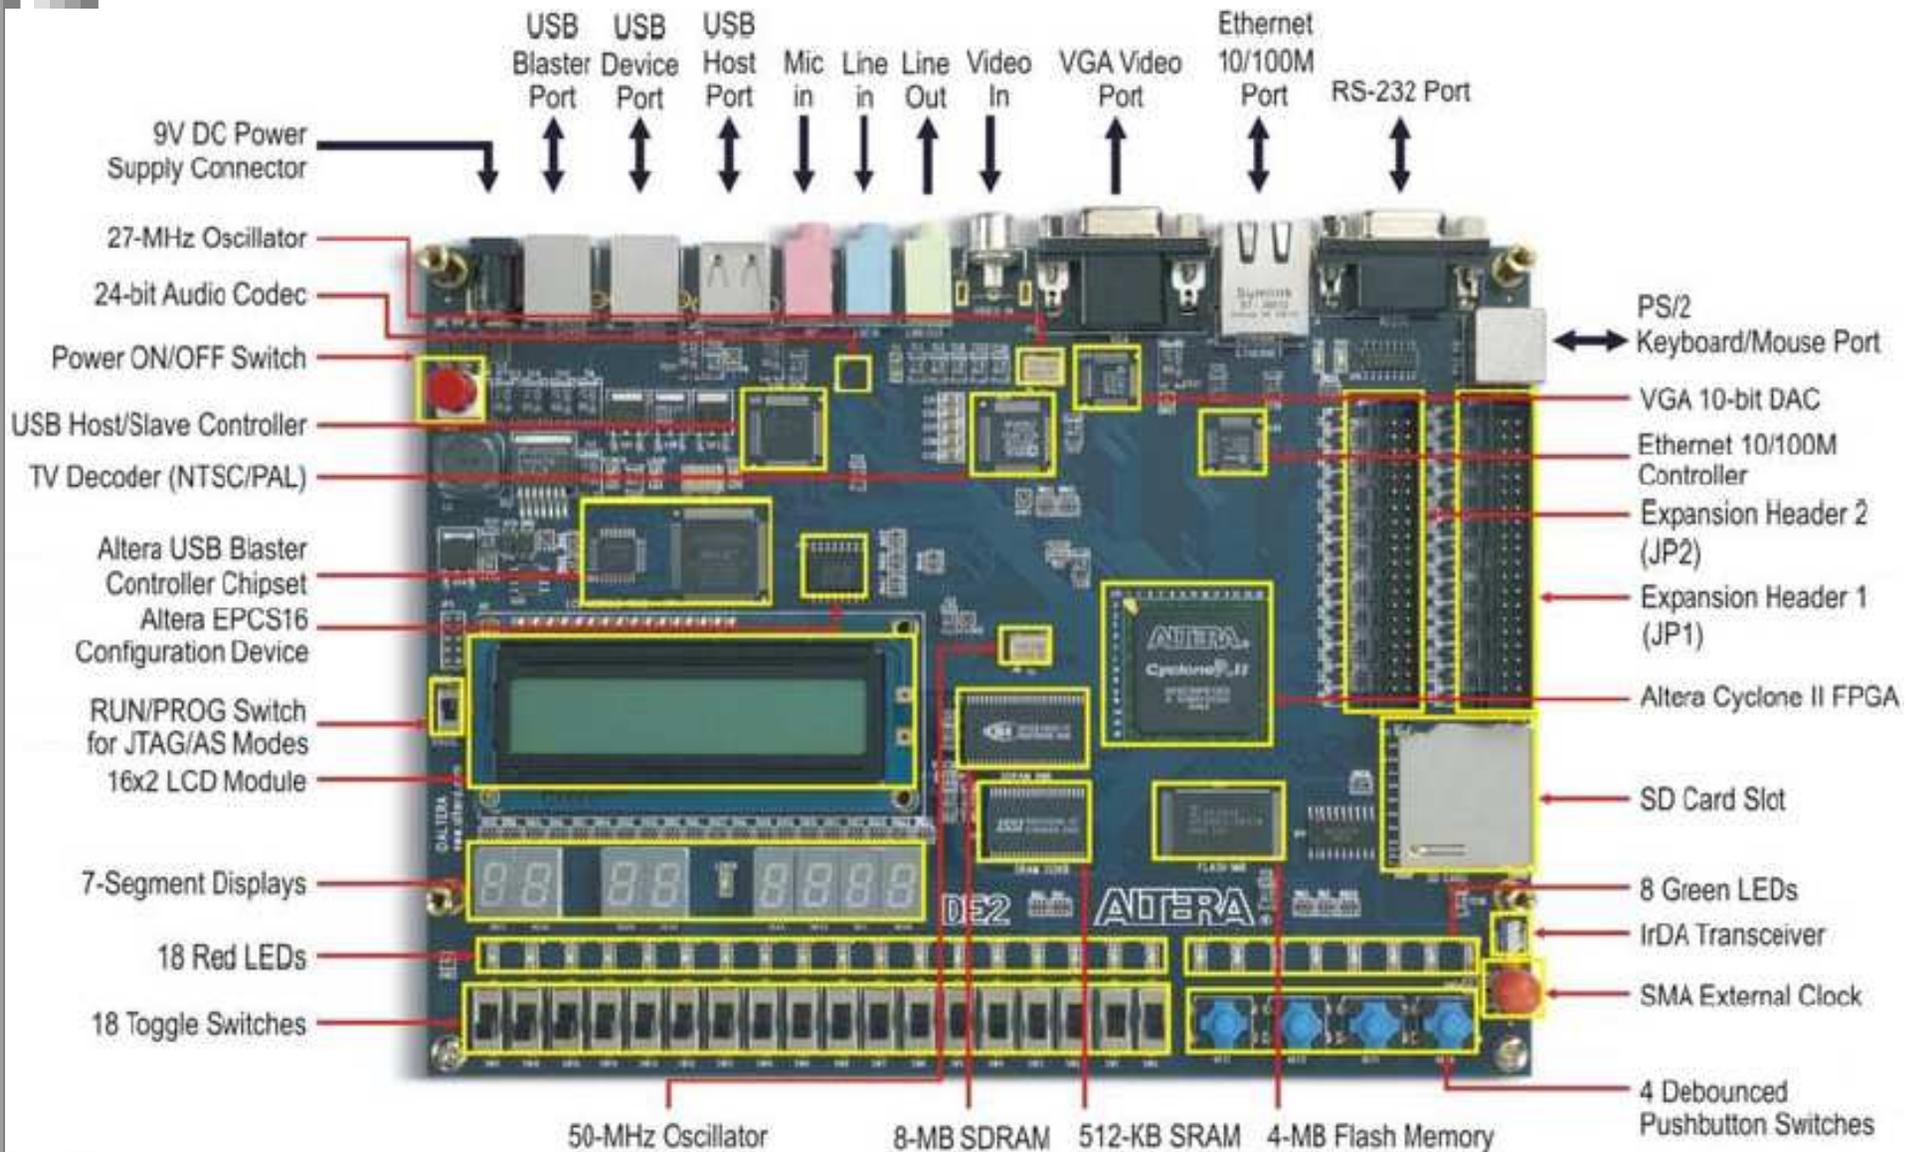

Design cost increased from \$1M to \$300M

Your Nemesis: The Altera DE2

DE2 Peripherals

Class Structure

Three Introductory Labs: 1.5 weeks each

1. Access, modify, and display memory in VHDL
2. An Ethernet chat client (software only)
3. Either
 - (a) an FM audio synthesizer; or
 - (b) a video bouncing ball.

The project: **Design-your-own**

Custom Project Ideas

Broadly: C + VHDL + peripheral(s)

Video game (e.g., Pac-Man)

Video effects processor

Digital picture frame

Serial terminal

Serial port monitor

Very fancy digital clock (w/ video)
