## PRIVACY IN A NETWORKED WORLD

CS456A/CS765A Spring 2005 Prof. Rebecca N. Wright Case Study Questions 15 February, 2005

## Questions we will ask for case studies:

- 1. Was this a privacy violation? If so, why and in what way? If not, why not?
- 2. What could the affected individual(s) or other entities have done to protect themselves?
- 3. What else could have been done (e.g. by the community, the authorities, or other entities) to avoid the violation?
- 4. Why did this happen? Were there reasons the privacy violation(s) might have been justified? If so, do you think it was justified in this case?
- 5. If there was such a "tradeoff", are there technological or other solutions that could break the apparent tradeoff, by accomplishing the desired goals without compromising privacy?
- 6. Are there any applicable laws or other regulations? How does this adhere to or violate the Fair Information Practices?

## Fair Information Practices

For reference, here are the 1973 U.S. Department of Health, Education and Welfare (HEW) Code Fair Information Practices:

- 1. There must be no personal data record-keeping systems whose very existence is secret;
- 2. There must be a way for an individual to find out what information is in his or her file and how the information is being used;
- 3. There must be a way for an individual to correct information in his or her records;
- 4. Any organization creating, maintaining, using, or disseminating records of personally identifiable information must assure the reliability of the data for its intended use and must take precautions to prevent misuse; and
- 5. There must be a way for an individual to prevent personal information obtained for one purpose from being used for another purpose without his or her consent.
